

NICK TAYLOR

720.483.2883 ◊ nickolas_taylor@mines.edu

www.linkedin.com/in/taylorxnick ◊ <https://github.com/nickxtaylor>

SKILLS & CLEARANCES

- Active TS/SCI security clearance
- MATLAB & Simulink
- SolidWorks CAD
- Python
- STK (Level 1 Cert.)
- Git, Linux, \LaTeX
- C/C++
- AFSIM
- FEA/FEM (ANSYS, Abaqus)
- Arduino
- LabVIEW
- Subtractive Manufacturing, GD&T

EDUCATION

Master of Science — Mechanical Engineering Colorado School of Mines

August 2023 to December 2024
3.77 Cumulative GPA

- Completing 2 graduate degree coursework tracks: Robotics & Controls, Solid Mechanics
- Concurrently pursuing a **Space Resources Graduate Certificate**

Bachelor of Science — Aerospace Engineering University of Colorado at Boulder

August 2017 to May 2022
3.20 Cumulative GPA

- Minors in Mathematics and Space Sciences

ACADEMIC RESEARCH PROJECTS

Hardware Team Lead

October 2023 to May 2024
Colorado School of Mines

ARIA Robotics Research Lab — <https://www.ariarobotics.com/>

- Led a team of students to design and manufacture a universal sensor backpack of COTS sensors for a SLAM robotics research lab using 3 robots (Boston Dynamics Spot, Clearpath Jackal and Husky).
- Cut and assembled all T-slot aluminum extrusion, aluminum composite and AVS panelling materials for the sensor backpack using band saws and laser cutters.
- Designed, 3D printed and installed mounting hardware for an on-board computer, external battery, router, LCD PCB and buck converter mounts using SolidWorks, a Prusa MK4 3D printer and power tools.

Analytical Modeling & Manufacturing Lead

August 2021 to May 2022
CU Boulder

BioAstronautics Research Lab — <https://www.colorado.edu/bioastronautics/>

- Engineered a 90 degree test bed loading apparatus that generates an artificial gravity force constantly acting normal to a user's support surface at their feet, regardless of their postural sway.
- Derived analytical models to predict the resistance due to friction experienced by the user to inform design decisions.
- Developed manufacturing and testing plans and then led subteams to procure, assemble and test the structural sub-system of the device in 8 weeks.
- Integrated analytical modeling expectations with experimental test results to verify design requirements and validate analytical models.
- Awarded systems engineering group award from the department at the end of the project.

PROFESSIONAL EXPERIENCE

Operations Research Analyst Intern (GS-09)

August 2022 to August 2023, May 2024 to August 2024
Peterson AFB, CO.

NORAD & USNORTHCOM HQ — J84 Analysis & Experimentation Branch

- Supported homeland defense designers and planners to refine design trade spaces by providing modeling and simulation solutions using AFSIM and STK software tools.
- Coded MATLAB programs to process output data from AFSIM simulations and display analytical results.
- Analyzed and monitored large datasets of event reports in MATLAB and Python to identify significant trends and anomalies to inform experiment designers.
